See the forwarded email below. This is from Jannsen which indicated that it would provide citrus data for Imazalil at the last CCPR.

Good morning,

Hope you are doing well, and that things are well during these unusual period we are living in.

Please find below Janssen PMP reponses to the questions received through CropLife EU.

1. *Are there any registrant concerns about focusing the meeting on new uses, as was done in the Extraordinary Session held in Ottawa in spring, 2019?*  
[[MND]] Janssen is planning to submit the dossier this upcoming fall, for the imazalil uses on grapefruit and mandarins (as per the attached excel) for evaluation. This submission is referenced in the final CCPR51 published docs - pdf attached point 65.
2. *Is a fall timeline feasible for your dossier preparation and submission timeline to JMPR? An October dossier submission deadline is being discussed as a possibility (but it is not final). There is urgency in completing the extraordinary JMPR session before the end of CY2021 for the US Government (December 31, 2021), because of constraints on availability of funding.*

**[[MND]]** Yes timelines seem to be feasible for Janssen.it would be preferable to receive a pre-notice about the submission deadline, in order to avoid surprises.

3. *We need to know what new uses (AI and crops) registrants would pursue if offered the opportunity to submit a dossier to the extraordinary meeting. Can you identify compounds that can be prioritized from the existing CCPR Schedule/Priority List? Are there other compounds that are not listed, but could be added if there is capacity for review?*

**[[MND]]** yes, Imazalil for grapefruit and mandarins (as the attached excel)

Please let me know if any clarifications are needed, and also, can you please confirm the receipt of this mail.

Stay safe.

Best wishes,

Dr Marie-Noëlle Douaiher
